

Grades 2-3 Checklist

- Continue reading.** Continue reading daily with your student to build strong comprehension skills.

- Maintain regular attendance.** Attending school regularly will help your child stay on track with their class.

- Discuss career goals.** Ask your student what they want to be when they grow up. Help them research the level or type of higher education required for their career goals.

- Get involved.** Actively engage in your student's education by regularly checking homework and communicating with teachers. This is the best way to discover any areas where they may be struggling.

- Plan an event.** Take your student to an activity or sporting event at a nearby college or the campus you attended. Start a conversation about degree programs offered in college and how they relate to certain careers.

- Talk about it.** Share your college experience with your student, both positive and negative. Talking about it will allow your student to ask all of their college-related questions.

- Continue saving.** Continue contributing money into a savings account for your student. Even if you can't always meet your savings goal, put away any amount you can; small deposits add up over time.

- Sign up.** Enroll your student in extracurricular activities. Participating in non-school activities can help your student learn more about teamwork and time management and develop a positive work ethic.
